

Good for Enterprise™

Good Mobile Control™ for iPhone

Mobile device management and security for iPhone made easy. Good Mobile Control for iPhone enables IT to manage large scale iPhone deployments. It delivers one central, browser-based place to deploy, secure and manage iPhones, providing complete visibility of the iPhones deployed within the enterprise.

For IT professionals, managing mobility is no easy task, especially as users demand support for an increasingly diverse range of mobile devices. Good Mobile Control for iPhone provides IT managers with the centralized control and end-to-end visibility they need to manage a fleet of iPhones.

Simplified IT Control for Large Scale Deployments

Good Mobile Control for iPhone enables IT managers to deploy and manage this highly requested platform in a controlled and scalable manner. Provisioning of corporate email and device policies is done completely over-the-air (OTA). With centralized, automated configuration and distribution of WiFi and VPN settings and security certificates, IT can say goodbye to manual tracking and multiple management consoles.

Visibility of the Entire Mobile Fleet

Minimize troubleshooting and support costs with complete visibility of all the iPhones deployed

within the enterprise, including hardware type, serial number, device sync history as well as policies applied. IT personnel spend less time managing desktop software and manually tracking iPhones while users spend more time connected and productive.

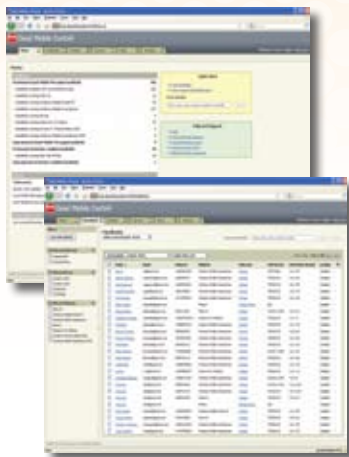

Enhanced Security

Good Mobile Control for iPhone provides enhanced security that protects over-the-air (OTA) transmissions and the device itself. IT managers can remotely control password policies and remote erase the device, in the event it's lost or stolen. Instead of opening up access to an unlimited number of devices connecting to corporate email via ActiveSync, IT can limit access to only one device.

Integrated Security and Management Across a Broad Range of Devices

Good Mobile Control for iPhone is fully integrated with the Good Mobile Control component of Good for Enterprise, simplifying the management and security of mixed device environments (e.g. Windows Mobile, Symbian, Palm, iPhone). From a single management portal, IT managers have a comprehensive view of an enterprise's entire mobile deployment. IT managers can filter users by policies applied to the mobile device, mobile OS or Good server. Once a filtered list is created, bulk actions, such as making policy changes, can be easily applied.

Simplify Enterprise iPhone Deployments

Complete control and visibility of large scale iPhone deployments

Controlled and scalable iPhone deployments— Good Mobile Control for iPhone enables IT to easily deploy and manage a fleet of iPhones. IT managers can centrally manage mobile device policies and settings. With robust wireless over-the-air (OTA) management capabilities, deployment of all device configurations and policies is a snap. Plus device management and security is accessed through a single, web-based interface, providing IT access from virtually anywhere. Key features include:

Security

- Encryption of OTA data transmissions
- Data encryption (available with iPhone 3G S hardware)
- Remote control of password policies
- Remotely erase the device, not just email and PIM data, if it is lost or stolen
- Limit corporate email access to a single device

Management and administration

- One central place to view and manage security policies and device configurations
- Management dashboard provides visibility of the entire iPhone fleet as well as other devices
- Anytime, anywhere management with the Web-based Good Mobile Control
- OTA provisioning of corporate email
- OTA policy management (e.g. password)
- Centralized management and distribution of VPN & WiFi settings and security certificates
- View device statistics to improve troubleshooting user issues
- Role-based Administration allows IT managers to delegate administrative tasks
- Filter users by policies applied, mobile OS or Good server
- Apply changes such as password policies or remote wipe to the filtered list of users
