

Good Messaging™ Version 4.9 for Microsoft Windows Exchange

Installing the Client from an SD Card

README

Updated 01/17/07

Overview.....	1
Installing from an SD Card	1

Overview

This release of the SD Client installer package includes software for Good Mobile Messaging Client Applications Version 4.9.3 for Palm, Symbian, Windows Mobile Pocket PC, and Smartphone-supported wireless handhelds. The Products link at www.good.com provides a list of supported handhelds.

Installing from an SD Card

You can position the Good Messaging client software on SD cards or handhelds in advance. Later, when the handheld user completes the Good Messaging setup, the client software will be installed from this location. This feature is for use in Exchange environments, not Domino environments. To prepare for installation from SD card:

SD card installation is supported for Domino environments as well. However the location of the packages on the SD card is fixed. The package needs to be placed under the root folder of the SD card in a folder called "GoodLinkPackages."

1. Set the user policy to enable client installation from SD card or handheld (refer to "Managing Software Policies; Updating Software on the Handheld" in the *Good Mobile Messaging Administrator's Guide*).
2. Download the client software package from www.good.com/download.
3. Transfer the client software to a mountable file system on the handheld, such as a storage card, in the location that you specify when you set the policy.
 - Palm – GLPkgPalm.prc, OTASetup.prc
 - PPC2005 – GLPackage2005.cab, GetGoodLinkPPC2005.cab
 - SP2005 – Smartphone2005.cab, GetGoodLinkSP2005.cab
 - Symbian - GoodMessaging.sisx, OTASetup.sisx
4. Insert the SD card with the Good Messaging client software in the handheld.
5. Open the OTA Setup file from the SD card and run the application. The OTA Setup application will install the Good Messaging client software from the SD card rather than downloading it from Good's webstore. NOTE that if the version of the Good Messaging client software package does not match the version you have specified in the Good Management Console for the user, the OTA Setup application will download the correct version from Good's webstore.
