

Good Mobile Solutions

Secure access to your email, intranet and applications on the move

Good Mobile Solutions, developed by Motorola Good Technology Group and well established in the US, gives you secure access to your email and your company's intranet and applications on your mobile device. It's designed to maximise productivity on the move.

Good Mobile Solutions gives you all the flexibility you need, allowing you and your colleagues to send and receive emails and access your company data on the move and in real time¹. It's compatible with a range of Windows mobile devices and familiar email platforms.

Available for Microsoft Exchange and Lotus Domino operating systems, it also enables you to access your company's intranet and web applications wherever you are.

Good Mobile Messaging gives you secure email on the move as well as access to your calendar, contacts and tasks

Good Mobile Intranet offers secure access to your company's Intranets, your business applications and the Internet.

Good Mobile Messaging

Good Mobile Messaging puts your key business applications on your mobile device². It delivers your enterprise e-mail, calendar, contacts and more – in real time.

For mobile professionals, every mile and every minute matters. Staying productive requires staying connected to co-workers, customers and partners. Good Mobile Messaging provides a mobile experience that not only makes you productive, but makes working while mobile enjoyable. Good delivers a mobile experience that is:

Easy to use and personal

Good Mobile Messaging's intuitive user interface ensures that you get up and running quickly while allowing you to personalise the way you view, prioritise, and find information. Good also allows you to select scrolling news feeders so that you can stay up-to-date with the business information you care about.

Easy to secure

Good Mobile Messaging provides end-to-end security that protects your company firewall, over-the-air (OTA) transmissions and the device itself. Hardware components such as cameras, etc. can even be remotely controlled.

Easy to manage

Good provides over-the-air installation, upgrading and management of Good as well as other handheld software. Your personnel spend less time managing desktop software and mobile devices while the end users spend more time connected and productive.

Additionally, Good provides real-time device fleet visibility which minimises troubleshooting and support costs by providing information on hardware type and version, software versions and even device status. This provides you with full device management over your devices and software.

¹Subject to network coverage. ²Subject to having a compatible device.

Good Mobile Intranet

Most devices come with their own browser for surfing the Internet. However, since these browsers don't operate over a secure channel, they cannot access corporate intranets, which reside within the corporate firewall. Good Mobile Intranet is an advanced, secure browser for mobile devices, allowing the user to easily access both the corporate intranet and the public Internet.

Good Mobile Intranet can also be used to mobilise information held in corporate applications like stock levels, CRM data and reporting applications.

Good Mobile Intranet delivers only the most critical information in an easily readable way. Good Mobile Intranet features the same secure mobile platform as Good Mobile Messaging, so you are assured that your confidential company information is secure. It also provides some great manageability and control tools so that IT auditing activities can easily be carried out. Good Mobile Intranet:

- Allows users to also access corporate applications that you have web formatted for Good Mobile Intranet
- Downloads multiple pages simultaneously and allows you to easily move among Good applications.
