

Good for Enterprise: Android

Support and Manage Android Smart Devices While Keeping Company Data Safe

Your employees love the convenience, versatility, and portability of their Android® smartphones and want to use them to access corporate email outside of the office. You want to offer employees the convenience of mobility while keeping corporate data and connections secure. Good for Enterprise™ is a safe, cost-effective way for employees to access corporate data while on the go. And you get to rest easy knowing that sensitive corporate data is highly secure, yet simple to access.

The Good for Enterprise app runs on a wide range of Android smartphones and tablets, and is used by leading enterprise companies who require highly secure access to enterprise data for their mobile workforces.

➔ SECURITY FIRST

Good for Enterprise uses patented end-to-end security that protects corporate data along each phase of delivery to all provisioned Android devices. Over-the-air transmissions and enterprise data at rest on the devices are secured with industry-leading FIPS certified AES encryption.

No need to make complex changes to your firewall settings or set up complicated new inbound connections—all Good servers are deployed behind the firewall with a secure outbound connection using standard port 443. Corporate data stays completely protected without disruptive changes to your current infrastructure.

➔ CORPORATE DATA, SECURELY CONTAINED

Good for Enterprise is a securely contained environment. Data is encrypted from the corporate server, and secure access stays within the Good for Enterprise application.

Employees access corporate email, save and manage files, and manage contacts and calendar entries through the Good for Enterprise app, on their Android smartphones, just as they access Outlook or Lotus Notes on desktop computers at the office. Additionally, users can securely navigate their corporate intranet for documents and dashboards, as well as other websites through a secure browser within the Good application.

➔ ALWAYS AHEAD OF THE MARKET

To increase users' productivity on-the-go, Good provides a complete and secure email attachment and file handling solution. Good's File Repository functionality combines security with flexibility, allowing employees to save and send attachments using a secure partition and file system.

Outside of the application, business and personal data don't mix, preventing potential data loss or leakage, often the result of business apps contaminated by consumer apps.

➔ VISIBILITY AND CONTROL

Good for Enterprise is not only a versatile application for your employees' portable devices, it also allows you complete control over your mobile workforce. Troubleshoot issues with total visibility into your staff's Android-enabled smart devices.

Protect corporate data through easy-to-apply policies, such as requiring passwords and preventing cut/copy/paste from the Good app. Perform remote wipe of enterprise data only, leaving personal data intact. Empower your employees with basic tasks, including the ability to add or remote-wipe their devices with an easy-to-use Web-based utility.

➔ WEB-BASED MANAGEMENT

Access a universal dashboard through any Web browser, and instantly view and manage all mobile devices in your workforce. Provision new Android smartphones, enforce passwords, distribute custom or 3rd party enterprise applications, establish role-based policies—from virtually anywhere, anytime. In short, spend less time managing software and more time protecting business data.

Good for Enterprise: Android

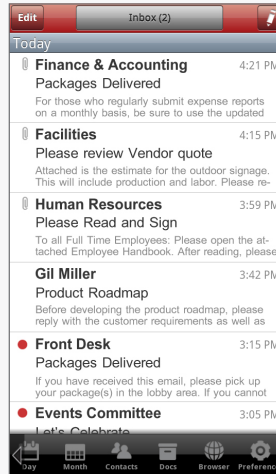

SECURE FEATURES THAT ARE EASY TO USE

A password dedicated to the Good for Enterprise app creates a secure connection.

Attach multiple files to the same email, when you compose, reply or forward an email.

Connect with your email inbox, just as you would in the office. Push notifications keep you updated with all activity in your account.

Securely browse critical corporate resources, such as Intranets, IT management portals, and executive dashboards within the Good for Enterprise app.

FEATURES	BENEFITS
Email, Calendar and Contacts secured through a single, easy-to-use application	Convenient, intuitive app enhances productivity
Complete Calendaring and Scheduling	Schedule and manage meetings from your phone while on the go
Secure browser	Safely access company Intranets, wikis, and Web-based applications
File Repository	Unique, secure partition and file system store and manage email attachments and other files
FIPS Certified AES Encryption	Ensure enterprise-class data protection
Enterprise Application Distribution	Securely distribute approved custom or 3 rd party applications outside the Good container
Web-Based Over-the-Air Management Console	Easily and securely deploy and manage employee mobile devices from any Web browser
Remote Wipe	Quickly and effectively delete the Good application and all encrypted corporate data if phone is lost or stolen—or wipe the entire device in situations that require it
Policy-Based Administration	Assign rights and permissions for different roles (managers, staff, administrators) so employees can perform tasks related to their jobs
Policy-Based Management	Create custom policies for different user groups and assign to one or multiple users at once
